SUMMARY

Final-year Computer Science (AI & ML) undergraduate with hands-on project experience across machine learning, deep learning frameworks (PyTorch), LLMs, and retrieval-augmented generation, as well as blockchain-based application development. Seeking an entry-level role in AI/ML or software engineering.

SKILLS

AI / Machine Learning : Artificial Intelligence, Machine Learning, PyTorch, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering

Programming Languages : Java, Python, Solidity, SQL

Computer Science : Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks

Web Development : HTML, CSS, Django, Spring Boot

Cloud / Tools : AWS, Git, GitHub, Hardhat, MetaMask, Ethers.js

PROJECTS

Food Donation Blockchain 🐙

- Developed a local Ethereum-based decentralized application for tracking surplus food donations from creation through pickup confirmation.
- Implemented a **Solidity smart contract** to manage donation states including **Available, Claimed, Completed, and Expired**.
- Added access-control logic to prevent donors from claiming their own donations and prevent multiple students from claiming the same donation.
- Implemented pickup confirmation by the original claimer and administrative controls for closing and restoring eligible donations.
- Built a **React dashboard** integrated with **MetaMask** using **Ethers.js** for blockchain interaction.
- **Tech Stack**: Solidity 0.8.26, Hardhat, React, Ethers.js, MetaMask, Ethereum

Demand Forecasting System

- Developed a demand forecasting system for analyzing historical time-series data and generating future demand predictions.
- Implemented forecasting workflows using **ARIMA** and **Random Forest Regression** models.
- Built rolling cross-validation pipelines to evaluate forecasting performance using **RMSE** and **MAPE**.
- Developed a **Streamlit dashboard** for dataset validation, missing-value handling, model training, forecasting visualization, and performance comparison.
- **Tech Stack**: Python, Pandas, Scikit-learn, ARIMA, Streamlit, Matplotlib

Library Management System

- Designed an object-oriented library management application to manage books, members, borrowing, and returning operations.
- Applied core **OOP concepts** including encapsulation, inheritance, polymorphism, constructors, method overloading, and method overriding.
- Implemented classes and relationships to model library entities and enforce controlled access to application data.
- **Tech Stack**: Java, Object-Oriented Programming

EDUCATION

PES University

Bachelor of Technology in Computer Science and Engineering (AI & ML)

2023 – Present

Bengaluru, Karnataka

- **Relevant Coursework:** Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Database Management Systems, Computer Networks, Artificial Intelligence and Machine Learning

ADDITIONAL

- Interested in software engineering, artificial intelligence, machine learning, blockchain development, and backend systems.
- Currently strengthening problem-solving and Data Structures and Algorithms skills for software engineering placements.
